Professional Summary

DevOps Engineer with hands-on experience in CI/CD pipeline automation, cloud infrastructure provisioning, containerization, and monitoring. Skilled in AWS, Docker, Kubernetes, Jenkins, Terraform, and Linux with strong understanding of Infrastructure as Code (IaC), cloud-native deployment, microservices architecture, and system reliability practices. Passionate about building scalable, automated, and secure cloud environments.

Education

Bachelor's in Software Engineering

University of Karachi

Jan 2022 – Dec 2025

Relevant Coursework:

- Distributed Computing
- Artificial Intelligence
- Cloud Computing
- Practical Networking
- Operating System
- Database Systems

Pre-Engineering

Govt. Degree Boys College Jahaur

Completed

Experience

DevOps Engineer

303 Inc.

Jun 2025 – Present

- Designed and implemented Jenkins CI/CD pipelines reducing deployment time from 3 hours to 25 minutes
- Migrated 5+ on-premise applications to AWS EKS, resulting in 40% cost savings
- Automated infrastructure provisioning using Terraform, managing 20+ AWS resources
- Implemented comprehensive monitoring with Prometheus and Grafana, reducing MTTR by 50%

DevOps Intern

303 Inc.

Mar 2025 – May 2025

- Collaborated with developers to streamline CI/CD pipelines, reducing build failures by 30%
- Automated infrastructure deployments using Terraform and Ansible
- Monitored application performance and system health

Projects

Fully Automated CI/CD Pipeline for Microservices

Tech Stack: Jenkins, Docker, Kubernetes, Trivy, Blue-Green Deployment

- Architected end-to-end CI/CD pipeline using Jenkins, Docker, and Kubernetes with automated security scanning (Trivy) and image vulnerability assessment
- Implemented blue-green deployment strategy ensuring zero-downtime releases and automated rollback capabilities
- *Impact: 80% faster deployments, 99.9% application availability*

Kubernetes Production Cluster Setup

Tech Stack: AWS EKS, Kubernetes, RBAC, Auto-scaling, Secrets Management

- Designed and deployed production-grade Kubernetes cluster on AWS EKS with auto-scaling, load balancing, and persistent storage
- Implemented RBAC, network policies, and secrets management for enhanced security
- *Impact: Successfully migrated 10+ microservices handling 50K+ daily users*

AWS Serverless DevOps Platform

Tech Stack: AWS Lambda, API Gateway, DynamoDB, S3, Terraform, GitHub Actions

- Built serverless web application using Lambda, API Gateway, DynamoDB, and S3 with infrastructure defined in Terraform
- Configured CI/CD pipeline with GitHub Actions for automated testing and deployment
- *Impact: 60% cost reduction compared to traditional EC2-based architecture*

Comprehensive Monitoring Solution

Tech Stack: Prometheus, Grafana, ELK Stack, Monitoring, Alerting

- Implemented full-stack monitoring using Prometheus, Grafana, and ELK Stack for 15+ microservices
- Created custom dashboards and alerting rules for proactive issue detection
- *Impact: Reduced mean time to detection (MTTD) by 70%*

Infrastructure as Code Automation

Tech Stack: Terraform, Ansible, AWS, VPC, EC2, RDS, EKS

- Developed modular Terraform configurations for AWS infrastructure including VPC, subnets, EC2, RDS, and EKS
- Integrated Ansible for post-provisioning configuration management and application setup
- *Impact: Infrastructure provisioning time reduced from 2 days to 30 minutes*

Real-Time Resource Monitoring Tool

Tech Stack: Python, Docker, Kubernetes, Grafana, Monitoring

- Created Python-based system monitoring tool with real-time CPU, memory, and disk usage tracking
- Containerized with Docker, deployed on Kubernetes, and visualized metrics in Grafana
- *Impact: Proactive alerting prevented 5+ potential production incidents*

Certifications

- CI/CD with Jenkins and Docker - Udemyl
- AI-Driven Infrastructure as Code (IaC) and Cloud Automation - Udemyl
- Mastering Linux: The Complete Guide to Becoming a Linux Pro - Udemyl
- AWS Essentials: A Complete Beginner's Guide - Udemyl
- Mastering AWS Serverless: Hands-On with Core AWS Services - Udemyl
- DevOps Master Class - TrainWithShubham
- Docker Mastery: with Kubernetes + Swarm - Udemyl
- DevOps on AWS: Code, Build, and Test - Udemyl
- Supercourse - Ultimate Advanced Kubernetes Bootcamp - Udemyl
- Ultimate Ansible Bootcamp by School of Devops® - Udemyl
- Ultimate DevOps Bootcamp by School of Devops® - Udemyl
- Linux: The Complete Guide - Udemyl

Technical Skills

Cloud & Infrastructure: AWS (EC2, S3, IAM, Lambda, VPC, RDS, EKS, CloudWatch), Serverless architectures

Infrastructure as Code: Terraform, OpenTofu (training), Ansible, AWS CloudFormation

CI/CD & Automation: Jenkins, GitHub Actions, GitLab CI, ArgoCD, Docker, rclone

Containers & Orchestration: Docker, Kubernetes, Amazon EKS, Docker Compose, Helm Charts

Monitoring & Observability: Prometheus, Grafana, ELK Stack, CloudWatch, logging and alerting

Programming & Scripting: Python, Bash, YAML, HCL, Groovy

Operating Systems: Linux (Ubuntu, CentOS, Amazon Linux)

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB

Version Control & Collaboration: Git, GitHub, GitLab, branching strategies, code review workflows

Networking & Security: TCP/IP, DNS, Load Balancing, SSL/TLS, IAM Policies, Security Groups, VPC Peering
